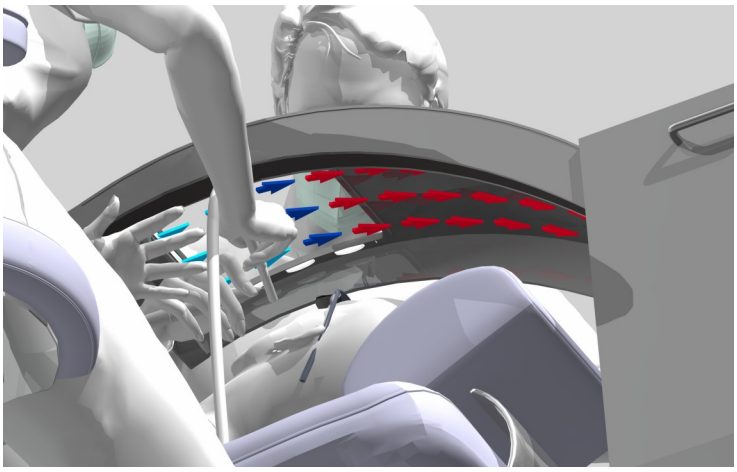
AirShield™

Aerosol Filtration System

Protect Your Patients, Your Staff, and You!

AirShield will greatly reduce dental procedure aerosols! Particulates will no longer float all over your office landing on instruments, tables, floors, your patient, your staff, and you!

AirShield's unique design starts by placing a physical barrier between you and your patient. The window positions 10" above the patient and 10" below your eyes allowing plenty of unobstructed room to work.



Next, air is directed out to the end of the shield arm, then a column of air is pushed back, under the curved view window, where a 176 CFM suction captures the air on the other side of the window. Aerosols are pulled into the vacuum. This design allows for a large work area, approximately 12" x 12" - much larger than all other "suction-only" devices on the market.

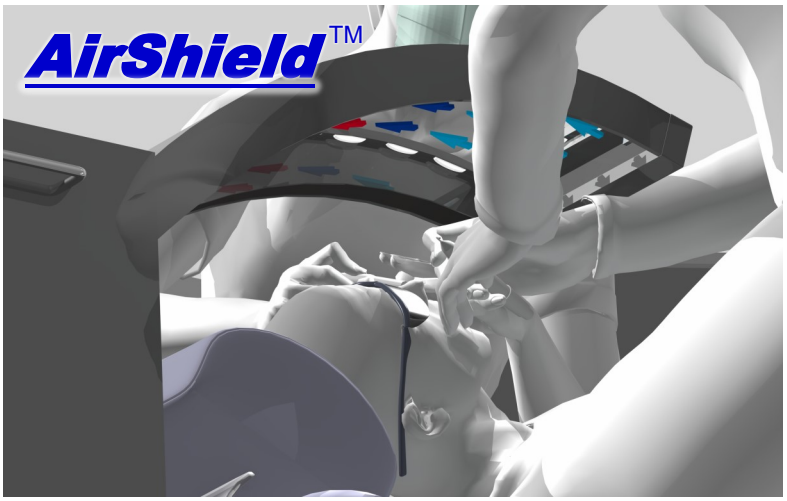
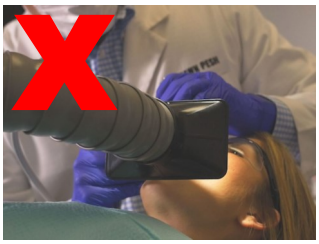
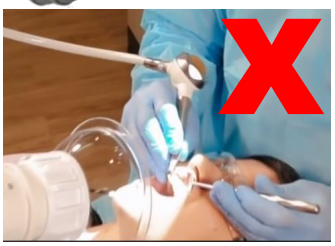
Like a glorified Shop-Vac®, every other aerosol filtering device on the market **only sucks air**! This "suction only" design can only clear an area from about 2-3 inches from the suction head. It's virtually worthless as the suction head moves farther away. In addition, if your hands gets in the way of the air flow or you need to position your hands where the suction head is already located, you'll have to stop and reposition the vacuum head to have any chance of pulling aerosols into their device.

What sets *AirShield* apart from all the rest is that it clears a much larger, 12" x 12", air space and it allows an unobstructed area for you to work.







Suction ONLY Devices

- Close proximity is scary for patients
- Extremely limited room to work
- Impossible for four-handed dentistry
- Requires constant repositioning

INTERESTING FACT: Since the invention of the Borden Air Rotor in 1957, dental aerosols have been a concern for the health of dental practitioners, staff and patients.

ADDED BONUS: 40 high-power LED's surround the ***AirShield*** view window flooding the patient's mouth from all angles with bright light. Shadowing is eliminated. No more trying to carefully position an overhead light only to have your head shadow exactly where you need to see. Touch pad controls allow the LED's to dim and each side can also be turned on or off.

Exclusive *AirShield* Feature

LED Lighted Window

AirShield™

Simple Operation

Lower the arm to turn ***AirShield*** filtration on.
Raise the arm to turn filtration off.
In this up position,
AirShield is also easy to clean.

(arm down)
Suction ON

(arm up)
Suction OFF

Cordless

No power cords to trip on!
Its 12 volt onboard battery allows the unit to run all day. Charge at night. **No other aerosol reducing device on the market has this exclusive feature.**

Compact - Easy to Move

The pedestal is just 12” x 12” and it easily rolls on hard floors or carpets. There are handles on all sides making it easy to position.

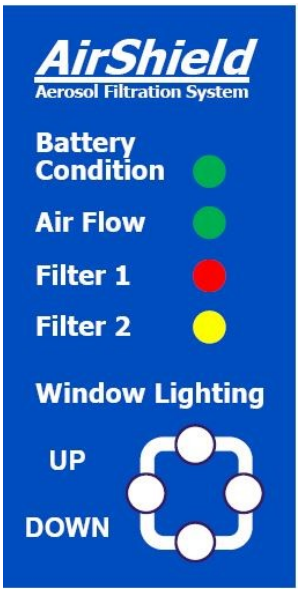
Filtration

AirShield has a two stage, high efficiency, medical grade, HEPA air filtration system which captures debris, particulates, mercury vapors, BPA particles, bacteria, fungi, prions, and small viruses like COVID-19 . ***AirShield*** also monitors filter usage and alerts you when a filter change is needed.

An easy access filter door makes changing ***AirShield***’s inexpensive filters a snap! Simply slide out the used filter directly into a bag, then insert a new one. The filter indicators automatically reset.

System Monitoring

Both the battery charge status and air flow are also continuously monitored so you know that ***AirShield*** is working perfectly.



Control Panel

Easy to understand .
Easy to use.
